

- Sending Excel-based Cognos Controller or TM1 reports rapidly and simply?
- Having reports available off-line?
- ... while still retaining all Excel functions?

edo.ValueConverter is an Excel plugin simply called up from the menu. A variety of functions help you to make the document available to people with no direct access to Controller or TM1:

- Searching and replacing formulae from IBM Cognos Controller or TM1
- Option of searching through all sheets or only the selected range
- Direct saving after conversion to ensure that your original remains linked with the data source

A post-overview conversion shows all changes made – so that you can always be sure that the procedure has been successfully completed.

System requirements

Windows XP / 7

Excel 2007 / 2010

IBM Cognos Controller 8.5.1 / 10.1

IBM Cognos TM1 9.4 / 9.5.2
